

Eagle Mountain-Saginaw Independent School District Standardizes on Lumens Ladibug Document Cameras

Lumens Ladibug[™] document cameras can be seen in many of the K-12 classrooms in the Eagle Mountain-Saginaw Independent School District in the state of Texas. When the school district added projectors into classrooms almost ten years ago, the next step was to add a document camera to assist teachers in their daily lessons. That's when the Ladibug document camera was introduced. Years later, the Ladibug has been the preferred document camera in the classroom.

By far, the features and picture quality have made the Ladibug the must have document camera. The document camera is easy to use and its gooseneck allows teachers to maneuver the camera during their demonstration or at the end of the day, relocate to a storage area. The Ladibug is used in Kindergarten classrooms for following the words along in a book. Also, Social Studies teachers use the document camera to enhance information such as maps. Math teachers no longer use overhead projectors and get their hands dirty using heavy ink based pens.

According to Eagle Mountain-Saginaw Independent School District's Technology Director, Kirk Murdoch, teachers in his school district have evaluated other document cameras in the market but prefer to use the Ladibug. "The Ladibug document camera is a great way to enrich learning in our classrooms from elementary to AP classes. They are an invaluable product for demonstrating any lesson. I would definitely recommend other school districts to try or switch over to the Ladibug," commented Mr. Murdoch.
